

Backend Flow for Weighbridge System Dashboard

System Architecture Flow Diagram:

Process Flow:

Step	Description
1	Vehicle arrives at weighbridge, frontend captures vehicle & driver info.
2	First weight captured by weighbridge panel, sent to backend API.
3	Backend API stores transaction with first weight in database.
4	Second weight captured later, API updates transaction and computes net weight.
5	Dashboard queries backend summary endpoint for stats & reports.
